PHP Developer (Symfony)

Adecco Information Technology connects the best IT experts with the right job opportunities in leading IT companies. We are a team of dedicated consultants specialized in providing recruitment and HR services in the IT industry. For our client, an international company focused on development of large online platforms in the fintech sector, we are seeking for motivated and qualified PHP Developers to join their office in Belgrade.

What you will do:
- Develop web app back-end logic, mostly using Symfony framework and Doctrine ORM
- Create database schemas that represent and support business processes
- Some front-end tasks with Angular, jQuery, Javascript, HTML5
- Develop, test, and maintain robust, scalable, high-quality software
- Write highly organized, maintainable code
- Solve difficult problems while continuously learning and improving
- Implement security and data protection

What we require:
- English language - above intermediate level is needed as we use it in daily work
- Experience with OOP in PHP, with Symfony framework, Doctrine ORM, MySQL queries - to be able to keep up with our projects we estimate that 3-5 years of experience is needed
- Experience with versioning control with GIT
- Experience with Unit testing, with PHPUnit testing framework
- Experience with continuous integration
- Experience with automated testing and test-driven development
- Responsibility for your work - Senior developer's scope of responsibility is not only the current task, but the whole project
- Initiative - Senior developer is supposed to take his own initiative to improve code, suggest solutions, fix problems, not only do what's told
- Experience with teamwork, collaboration, pair programming

What we offer:
- Working in a friendly team of young people, flexible working hours, no bureaucracy or unnecessary pressure
- Opportunity to constantly learn and use new technologies, keep up-to-date with web development trends
- Opportunity to show yourself and apply your skills, to progress faster than in large companies
- Working under Agile principles, especially SCRUM framework
- Ability to learn new things through team training, learning and group exercises
- Becoming a team lead for future projects is possible
