

.NET

Here @ Comtrade we do high-tech sciency stuff, but we do fun as well :) Our story is of great commitment and passion of the best people in the business. This commitment lead to Comtrade becoming a household name for helping even the largest enterprises in the digital transformation of their businesses.

Our people's expertise and competencies gave way to a rapid growth, and today, Comtrade is an international company with over 1000 IT engineers, and counting.

As we form partnerships with some of the biggest Fortune 500 companies in the following industries:

- -Automotive & Industrial
- -Mobility & Travel products
- -Healthcare
- -Smart Energy
- -Logistics
- -Public Sector

Most of our projects are agile lead and adhere closely to coding best practices. The teams are fluid and often our people have the opportunity to switch to another project, something that they find exciting and valuable for keeping up to date with the current tech changes.

We @ the HR department try our best to prevent any case of "All work and no play makes jack a dull boy" so there are a lot of facilities (gym, running track, sports courts) and a game room for keeping our minds and bodies in shape :)

Required/recommended skills and knowledge:

- Excellent technical knowledge of programing in C# and .NET platform
- Experience with designing, coding and testing new applications
- Experience with maintenance and upgrade of existing applications
- Knowledge of the following technologies: ASP.NET, .NET, MVC, java script, REST, SQL Server
- Knowledge: test driven development, entity framework, multi-threading, TPL
