

Software Development Engineer

Are you interested in developing cutting edge consumer technologies for the largest Internet company in the world?

We're expanding our team and offering the unique opportunity to work on new consumer devices along with some of the world's best engineers.

Software Development Engineers play an important role in the team and are exposed to all aspects of the project development life-cycle. They have strong problem solving skills, always see the "big picture" and enjoy mobile application development, specifically implementing Android applications for consumer media devices.

Responsibilities:

- Responsible for producing clean, high quality and standards compliant code
- Identify and communicate potential project issues and risks and potential consequences
- Work as a part of a team
- Maintain cutting edge knowledge of current and emerging technologies
- Stay on top of industry trends and standards in enterprise web applications

Qualifications:

- 3+ years experience in a hands-on role in Java development, C++
- Strong understanding of OOP concepts and Design Patterns
- Android, Linux experience
- Ability to understand project specifications and adapt to various technologies and frameworks
- Excellent English written and verbal communication skills

Nice to have but not required:

- Bachelor's degree in a technical field such as computer science or computer engineering
- Understanding of clustered and distributed system environments
- Strong experience with highly scalable server side development
