

Frontend Engineer - Mediatech Solutions Team

Our partner Mediatech Solutions (www.mediatechsolutions.es) is a market leader in the development of products and solutions for companies offering gaming & gambling in highly regulated channels and markets.

We are currently looking for a

Frontend Engineer

to join our Mediatech Team in Belgrade. You will closely and directly communicate and collaborate with your colleagues from Spain, bringing in your own ideas and shape projects in distributed scrum environment.

Next to being part of InterVenture, you are a part of our client's company culture, which also includes the participation in their incentives and bonus systems.

The project is a distributed, high transaction and a large-scale system.

Your responsibilities:

Design and develop new feature and functionalities

Participate in design, estimations, documentation and code reviews

Identify and address performance bottlenecks in the software

Design solutions that are modular, scalable and portable

Design and create unit tests, and use integration testing

Develop iteratively, test early; report on task progress regularly and promptly raise questions and warn of impediments; constructively communicate with QA department

Follow and promote software development best practices and maintain the highest quality of delivered software

Provide 3rd line support and troubleshooting when needed

Your Profile:

A bachelor's degree in a traditional science subject, ideally computer science, engineering, or information systems

3+ years of experience as a developer on enterprise projects

Proficient in JavaScript, TypeScript, Angular, CSS3, JSON, SASS

Knowledge of REST paradigm

Experience working on large JavaScript applications

Experience using version control systems (ideally Git)

Fluency in English, spoken and written

Experience with WebPack automation will be considered as a advantage

Understanding of design patterns in JavaScript will be considered as an advantage

Experience with C# and .NET ([ASP.NET MVC](#), WebAPI) will be considered as an advantage

Our offer:

Work on a new and innovative technologies and great equipment

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Work in international team of talented engineers

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a constantly stimulating environment

Data Warehouse Engineer - Tamedia Team

Our partner Tamedia (www.tamedia.ch) is the most successful digital company in Switzerland. The company is founded in 1893 and has been listed on the Swiss Stock Exchange since 2000 and has over 3500 employees within 16 companies across 5 countries.

The Tamedia Data Analytics Team (TDA) works with all these companies to build advanced data products and services. To further scale these systems and build new products we are committed to further grow this team and expand its engineering capabilities with a dedicated team of specialists in Belgrade.

To expand further our Tamedia team we are currently looking for a:

Data Warehouse Engineer

You closely work with the Zurich based part of the team to build a Data Warehouse platform that serves the management of the portfolio companies as well as management and controlling of the Tamedia group.

We actively use and contribute to open source projects by developing pieces that do not contain trade secrets as Open Source from the beginning.

Your Responsibilities:

Help setting up and continuously improve the data warehouse setup

Develop ETL jobs

Bring in your ideas and take ownership within the projects.

Actively help shaping our engineering culture

Your Profile:

Strong technical experience in designing and implementing Data Warehouse solutions

Experience with DWH technologies

Experience with ETL tools, preferably Talend

Strong SQL skills and understanding of database internals

Experience in at least one statically typed programming language.

Good understanding of Linux

Must be self-starter and able to demonstrate experience working in an agile environment to deliver robust & well tested solutions

Strong interest in learning new technologies

Also at least one scripting language. We currently use Python, Ruby and Lua

Our Offer:

Work in an international team of talented engineers

Develop further on modern technologies and innovative projects

Highly competitive salary and fringe benefits

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Web Developer - Escribe Team

Our partner ESCRIBA AG is the leading provider of technology for the digitization of document-intensive processes (Document Management Lifecycle). Their product allows users to create high-quality and individual documents in any digital and analog form using simple means and to control processes.

To expand our Escribe team we are currently looking for a:

Web Developer

Your Responsibilities:

Suggest UX solutions based on thorough understanding of the responsibilities of the platform and existing web services used in the system

Creating self-contained, reusable, and testable modules and components

Creating custom, themeable, general use modules and components which extend the elements and modules of core Angular

Building the infrastructure for serving the front-end app and assets

Professional, precise communication skills

Required Skills & Experience:

Strong experience with Angular 2

Javascript / Typescript

HTML 5

CSS3 / SASS

Jasmin, Protractor, Karma Testrunner

Bonus skills:

An eye for design.

REST, JAVA

SAPUI5 / OpenUI 5

OData / Olingo

Knowledge of common architectural patterns / design patterns

Methodologies:

Agile development with Scrum

Continuous integration

Test driven development

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Great equipment

Work in international team of talented engineers

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Senior Java Developer - Gogo Team

Our partner Gogo (www.gogoair.com) is the leading provider of in-flight connectivity and wireless entertainment solutions for the aviation industry across the world.

To expand further our Gogo team we are currently looking for a

Senior Java Developer

You will closely collaborate with the other team mates in Chicago, U.S. in a distributed Agile environment.

You will participate in building our next generation application platform using RESTful microservices in the cloud. Some of the technologies we use daily are Spring and Netflix OSS running in AWS. The ideal candidate for this role would have experience and passion for building horizontally scalable Java based microservices.

Your Responsibilities:

Participate in full project life cycle – from inception and development to production and support

Design, develop and further enhance existing Microservices Architecture

Design and develop reusable libraries shared by Microservices

Perform one of key roles in the team

Required Skills & Experience:

Computer science, engineering or information systems degree

5+ years of experience

Spring (Boot, Cloud, Core, MVC, Security)

Experience with AWS services and infrastructure

Java 8 Stream API and Lambda

Strong technical background in software design, patterns and architecture

Bonus Skills:

Experience with Netflix OSS tools

Cloud deployments, containers, and continuous integration

Our Offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Excellent work life balance

Work in an international team of talented engineers

Great equipment

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

QA Engineer - Mediatech Solutions Team

Our partner Mediatech Solutions (www.mediatechsolutions.es) is a market leader in the development of products and solutions for companies offering gaming and gambling in highly regulated markets.

We are currently looking for a

QA Engineer

to join our Mediatech Solutions Team in Belgrade. You will closely and directly communicate and collaborate with your colleagues from Spain, bringing in your own ideas and shape projects in distributed Agile environment.

Periodically, you will also attend team meeting and team building events at our clients' site. As such, next to being part of InterVenture, you are a part of our clients' company culture, which also includes the participation in their incentives and bonus systems. The project is a distributed, high transaction and a large-scale system.

Your responsibilities:

Definition of test plans and test cases, automation and implementation

Bug tracking and quality assurance

Your Profile:

A bachelor's degree in a traditional science subject, ideally computer science, engineering, or information systems

5 years of experience in quality software engineering

Experience in defining, implementing and executing tests (manual or/and automated)

Testing experience using automation and integration tools: Jmeter, SoapUI, Selenium

Ability to understand and analyze technical specifications

Knowledge of C# and SQL

Team player, creative thinker with proven analytical skills

Fluency in English (Spanish will be considered as a strong asset)

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Great equipment

Work in international team of talented engineers

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Senior Software Engineer .NET/C# - Mediatech Solutions Team

Our partner Mediatech Solutions (www.mediatechsolutions.es) is a market leader in the development of products and solutions for companies offering gaming and gambling in highly regulated markets.

We are currently looking for a

Senior Software Engineer: .NET/C#

to join our Mediatech Team in Belgrade. Next to being fully involved in the whole development process locally, you will also closely and directly communicate and collaborate with your colleagues from Madrid, attending team meetings and team building events at our clients site.

As such, next to being part of InterVenture, you are a part of our clients company culture, which also includes the participation in their incentives and bonus systems. The project is a distributed, high transaction and a large-scale system.

Your responsibilities:

Design and develop new features and functionality

Participate in the whole process - from design and estimations through developing and code reviews to documentation and deployment

Develop iteratively, test early; report on task progress regularly and promptly raise questions and warn of impediments; tightly communicate with QA

Design solutions that are modular, scalable and portable

Design and create unit tests, and use integration testing

Follow and promote software development best practices and maintain the highest quality of delivered software

Identify and address performance bottlenecks in the software

Provide 3rd line support and troubleshooting production problems when needed

Your Profile:

A bachelor's degree in a traditional science subject, ideally computer science, engineering, or information systems

5+ years working experience in .Net stack is a must

Demonstrable talent in C# programming with emphasis on clean code and modern language features

Knowledge of Web development technologies (ASP.NET MVC, WCF, WebAPI, ASP.NET Core) and internet protocols

Strong technical background in software design, patterns and architecture in multi-tier, multithreading, back-end systems

Knowledge of message queuing systems

Experience in database development and design with Microsoft SQL Server

Experience using modern version control systems (ideally Git)

Fluency in English, spoken and written

The ideal candidate would also have:

Knowledge of front-end technologies (JavaScript, Angular, Typescript, HTML, CSS)

Knowledge of WPF

Knowledge in the domain of online gaming and gambling

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Great equipment

Work in international team of talented engineers

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Team Lead Backend Engineer - Ricardo Engineering Team

Our partner [ricardo.ch](http://www.ricardo.ch) (www.ricardo.ch) is the largest online marketplace in Switzerland with over 1 million listed items and more than 2 million users and it has ownership on everything related to building the best search experience, from the infrastructure to the ranking algorithms and user experience.

To start our ricardo.ch team in Belgrade we are looking for a

Team Lead Backend Engineer

If you want to make a difference and have an impact on e-commerce shopping in Switzerland, join ricardo.ch!

We believe in continuous improvement, clean code, simple design, speed and scalability. We need strong team lead who can join most projects and push innovation forward.

Your Responsibilities:

Build robust and scalable software focused on data import, enrichment, search, discovery and classification

Domain expertise in the areas of product definitions, marketplace data handling, user shopping activities and external providers of content

Design and create services and architecture using containers, microservices, client applications, event sourcing and data analytics

Contribute and provide feedback to other teams and engineers, prototypes, pull requests

Help improve code quality through writing unit tests, automation tests and performing peer code reviews

Participate in brainstorming sessions and new ideas around our technology, algorithms and products

Work with the product and design teams to understand end-user requirements, formulate use cases, and then translate them into a pragmatic and effective technical solution

Dive into difficult problems and successfully deliver results in frequent iterations

Solve impediments impacting team productivity

Competencies:

High capacity of problem solving in data, algorithms, classification, and search

Strong communication with employees and the company

Creativity and challenging status quo

Ability to provide a positive and spirited atmosphere in the team (team building)

Leadership skills, fair decision making

Ability to motivate the team of engineers and shape outcomes

Required Skills:

Strong experience of Java, GoLang, SQL

Mastery of best practices in backend development across multiple languages and related frameworks

Knowledge about search systems like Solr or ElasticSearch

Knowledge about event based system and technology used (Kafka, ActiveMQ)

Knowledge about ReST API and RPC

Familiar with data processing pipelines, recommenders, classification, machine learning and statistics

Relationships:

Working closely with backend team in Zug (similar technology and same goals)

Participate in team events, on-site visits, hackdays, demos, all-hands, etc.

The team target is 3-4 people, senior engineers

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Great equipment

Work in international team of talented engineers

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Hybris Developer - Tamedia Team

Our partner Tamedia (www.tamedia.ch) is the most successful digital company in Switzerland and has over 3500 employees within 16 companies across 5 countries. The digital platforms as well as the daily and weekly newspapers and magazines of Tamedia provide an overview, topic classifications and great selections. The company founded in 1893 employs approximately 3,400 employees in Switzerland, Austria, Denmark, Luxembourg and Germany and has been listed on the Swiss Stock Exchange since 2000.

If you want to make a difference join Tamedia with InterVenture in Belgrade!

If you enjoy solving problems in a creative way with elegant solutions then you will enjoy working with us as a

Full Stack Engineer

We believe in continuous improvement, clean code, simple design, speed and scalability. We need strong engineers who can join most projects and push innovation forward.

Your Responsibilities:

Maintain and write object-oriented JAVA code to develop our Hybris platform

Maintain and write code for Interfaces between the whole system landscape REST/JSON

Support internal units and being the first contact person for technical questions

Preparation of test-cases, testing and training of internal units

Maintaining master data, configuration of the platform and ensuring the incident, problem and change-management processes

Developing technical concepts together with the product owner

Evaluating offers on technical bases

Implementing requirements

Your profile:

3+ years of practical experience

Client and server-side web technologies such as JavaScript, HTTP REST APIs, HTML, JSON, CSS, Java, Selenium

Experience with one or more frameworks such as Spring, Bootstrap or Ranorex

Unix / Linux know-how

Monitoring and Development experience

Good understanding of CMS

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Great equipment

Work in international team of talented engineers

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Data Engineer – Tamedia

Our partner Tamedia (www.tamedia.ch) is the most successful digital company in Switzerland and has over 3500 employees within 16 companies across 5 countries.

The Tamedia Data Analytics Team (TDA) works with all these companies to build advanced data products and services. We work with cutting edge technologies to go from research prototypes into production systems at a rapid pace. Our systems serve more than 40% of the attributable swiss internet traffic and reach more than 85% of the swiss population on a monthly basis. If you are as much as a data nerd as we are, you realize that this is an unique opportunity to join us as a

Data Engineer

You will closely work with the Zurich based part of the team: Data Scientists, Engineers and Product Managers to build a proprietary high-performance data analytics platform. Our platform is based on the concept of real-time stream processing and built to scale. We use kubernetes and a variety of different languages (Scala, Go, D, Python etc)

We actively use and contribute to open source projects by developing pieces that do not contain trade secrets as Open Source from the beginning.

Responsibilities:

Build and enhance a high performance, high volume real-time stream processing pipeline

Implement services and APIs that are used by internal and external customers

Work with Data Scientists to implement production grade services (e.g. we built image recognition and text classifiers that are used within our classified sites)

Do research and build prototypes to leverage current and upcoming internet technologies into producing insights about user behavior

Bring in your ideas and take ownership in project

Actively help shaping our engineering culture

You bring:

MSc in Computer Science or a related field

Experience in at least one statically typed language. We use Scala, D, C, C++, GO.

Good understanding of Linux or any BSD OS as well as familiarity with system debugging tools such as strace, atop, iotop, netstat, lsof, iptables, valgrind, gdb.

Also at least one scripting language. We currently use Python, Ruby and Lua.

Solid understanding of networking and internet plumbing such as TCP, TLS, HTTP

Good understanding of data structures

Strong grasp of database structure, design, query languages (e.g. SQL), fundamentals of mathematics, large data sets, distributed systems and statistical concepts

Interest in working with team-mates to explore the question: “What else can our data tell us?”

Being technology/language agnostic, willingness to use different languages.

Willingness to contribute to open-source projects

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Excellent work life balance

Work in an international team of talented engineers

Great equipment

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Frontend Engineer - Gogo Team

Our partner Gogo (www.gogoair.com) is the leading provider of in-flight connectivity and entertainment solutions. Gogo connects the aviation industry and its travelers with innovative technology and applications, all of this in a high-energy environment that welcomes the next challenge.

To expand further our Gogo team we are currently looking for a
Frontend Engineer

You will closely collaborate with the other team mates in Chicago, U.S. in a distributed Agile environment.

Required Skills & Experience:

Experience with one or more modern JavaScript frameworks (preferably React with Redux/Flux)

Proficiency in core JavaScript (preferably ES6)

Experience developing cross-browser and responsive web apps

Understanding of clean code principles

Bonus Skills & Experience:

Enzyme, Jest

Webpack, Grunt, Gulp

RESTful APIs

Performance analysis and improvement techniques

You are:

Passionate about JavaScript development

Continuously looking for new technologies and approaches - helping us keep ahead

Team player

Committed to excellence, best practices, and the continuous improvement of our product, code base, processes, and tools

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Excellent work life balance

Work in an international team of talented engineers

Great equipment

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

Junior Frontend Engineer - Gogo Team

Our partner Gogo (www.gogoair.com) is the leading provider of in-flight connectivity and entertainment solutions. Gogo connects the aviation industry and its travelers with innovative technology and applications, all of this in a high-energy environment that welcomes the next challenge.

To expand further our Gogo team we are currently looking for a

Junior Frontend Engineer

You will closely collaborate with the other team mates in Chicago, U.S. in a distributed Agile environment.

You are:

At the beginning of your career or have just graduated (engineering or computer science)

Believe in Atwood's law that any application that can be written in JavaScript, will eventually be written in JavaScript

Want to become proficient in JavaScript/HTML/CSS (or already are), to master React, Redux and other top notch technologies

Have good understanding of OOP and/or functional programming

Continuously looking for new technologies and approaches

Last but not the least – you are a team player

Our offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Excellent work life balance

Work in an international team of talented engineers

Great equipment

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

(Senior-) Web Developer: Magento (Full Stack) - Exconcept Team

Our partner Exconcept (www.exconcept.de) is a web development company with its headquarter in Stuttgart, Germany. The company is specialized in development and maintenance of B2B/B2C online shops and corporate website solutions for SMB and enterprise customers located in Europe and U.S. We work with common international technologies like Magento, PrestaShop, TYPO3, Symfony, AngularJS and with special solutions for the German market such as Shopware and OXID eSales.

To expand further our Exconcept team we are currently looking for a

Web Developer: Magento

You will closely collaborate with the colleagues in Stuttgart in an Agile environment.

Your responsibilities:

After the initial phase of getting familiar with your direct colleagues, project managers and development environments you'll be involved in existing and new projects. This includes:

Developing solutions for client-specific requirements

Developing complex online shops based on Magento 1.x, Magento 2.x and Zend Framework based web applications

Implementation of new features in existing Magento projects

Maintaining and optimization of already implemented functionality in Magento projects

Creation and maintaining of project documentation

Technical conception of whole projects or project parts

Accurate estimating and technical planning of projects

Your Profile:

A bachelor's degree in a traditional science subject, ideally computer science, engineering or mathematics

At least 5 years of experience in the field of web development

Experienced with Magento, Zend Framework

You are used to work with frontend frameworks like Bootstrap or Foundation

Fluency in English. German will be considered as a big plus.

Our Offer:

Work in an international team of talented engineers

Develop further on modern technologies and innovative projects

Highly competitive salary and fringe benefits

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment

DevOps Engineer - Gogo Team

Our partner Gogo (www.gogoair.com) is the leading provider of in-flight connectivity and wireless entertainment solutions for the aviation industry across the world. To expand further our Gogo team we are currently looking for a:

DevOps Automation and Tooling Engineer

Like a growing number of other tech companies, Gogo believes that for modern companies to survive, it's important to empower developers to run their own infrastructure. To this end, the DevOps team have done some remarkable things to simplify process and empower developers with rich tooling to support this philosophy.

Although the DevOps team is responsible for running their own infrastructure in AWS, it's fundamentally not an operations team, and it does all it can to drive the availability and simplification of its systems.

We are looking for a smart, creative individual who has a solid understanding of the world from a systems perspective who is passionate about reducing system complexity and driving automation as well as developing their own skills and the skills of their peers.

The ideal candidate for this role will have a solid and practical understanding of build systems, version control, and managing and deploying system at scale. Perhaps more importantly, though, it's essential to be forward-thinking, eager to learn and have a passion to explore and experiment with the latest technologies.

Key Responsibilities:

As part of a team, you will design, develop, deploy and continuously improve enterprise-grade

AWS based build and deployment tooling

You will assist other teams in adopting best build, test and development practices

Individually and collaboratively, you will Identify, adapt, and adopt new technologies

Required Skills & Experience:

Bachelor's degree in Computer Science, Engineering, or related discipline, or equivalent experience

You have extensive knowledge of Python, Groovy, or similar language

You possess a solid understanding of version control systems such as Git

You are extremely competent in terms of administering Linux systems

You have demonstrated, practical experience utilizing REST-based APIs in a scripting environment

You can articulate ideas clearly and concisely

You are able to integrate well with a social and collaborative team

Bonus Skills & Experience:

Demonstrated experience utilizing Agile/Lean methodologies

Experience with AWS services such as EC2, VPC, ELB, and auto scaling

Netflix OSS tools such as Spinnaker, Simian Army, or equivalents

Experience working in a DevOps environment

Cloud deployments, containers, and continuous integration

Knowledge of the Java programming languages and Java frameworks

Our Offer:

Competitive salary and a variety of fringe benefits

Personal development/education (conferences, trainings)

Opportunity to use cutting edge technologies, and to work on greenfield projects

Great equipment

Work in an international team of talented engineers

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in an stimulating environment

Senior Frontend Developer: Angular JS - Rocketmedia Team

Our partner ROCKETMEDIA (<http://rocketmedia.ch/>) is a Swiss Web Development agency specialized in custom web development. The project portfolio is a well balanced mix of small to mid-sized projects and large, product – like software solutions. Rocketmedia maintains a lean approach to software development with a well established Agile development process, direct and efficient communication ways and emphasis on quality, clean code and scalability.

To expand further our Rocketmedia team we are currently looking for a

Senior Frontend Developer

You will work closely together with the Product Owner located in Zurich, Switzerland in a distributed Agile environment.

Your Responsibilities:

After the initial phase of getting familiar with current projects, specific modules and the future project pipeline, you will be involved in developing new features and maintain existing functionalities. You will be also involved in architectural and design decisions and in the quality assurance process as well.

Your Profile:

In-depth knowledge of JavaScript, in particular AngularJS and related technologies – HTML and CSS/SCSS

Know-how of PHP and related frameworks (the main product currently being developed works with a Laravel setup)

Experience with modern web technologies and interest in modern

Programming methodologies (Agile, Pair-Programming)

Reliability, openness and a structured and professional mindset

Fluency in English

German language knowledge will be considered as a strong asset

Bonus Skills & Experience:

Experience with Bootstrap 3

Our Offer:

Work in an international team of talented engineers

Develop further on modern technologies and innovative projects

Highly competitive salary and fringe benefits

Modern and cozy working place with positive and friendly atmosphere

Opportunity to grow both professionally and personally in a stimulating environment
