

Schneider Electric DMS NS has a steady increase in number of ADMS projects worldwide and the growing need for competent and skilled engineers in project teams. We are constantly looking for ambitious people to join our project teams, improve themselves and represent our company in front of the customers.

We are looking for motivated employees to join the Delivery Solution Architects team for the following position:

SOLUTION ARCHITECT

The ideal candidate hired into this position should have the following competencies and experience:

- Minimum 3 years' experience in software design, development, or infrastructure design
- Advanced knowledge of enterprise architectures, computer systems, computer networks, security and databases
- Excellent communication skills with ability to analyze, explain and decompose business problems to technical concepts to lay audiences
- Proven experience in consulting engagements which includes estimating, scoping, and writing effective statements of work that clearly set expectations and limit risk
- Team player with experience in leading and cross-team collaboration to ensure successful delivery of solutions
- Strong problem solving and decision making skills
- Continuous learning ability - "thinking out of the box"
- An individual who is resourceful, confident under pressure, and has demonstrated skills in both crisis management and expectations management
- Strong verbal and written communication skills, fluent in English

Your Responsibilities:

- Leading technical role in a project team
- Leads work sessions with customer subject matter experts to thoroughly evaluate and understand requirements
- Accountable for large-scale complex application design, configuration, development, and integration for customer specific software solutions
- Establishing and enforcing architecture principles, patterns and guidelines
- Responsible for project's software delivery lifecycle and development progress tracking
- Supporting technical leads (SMEs) in the requirement clarification and solutions design
- Helping developers and product owners to better understand customer's requirements and use cases
- Develop and maintain positive relationships with colleagues, customers and sub-contractors
- Collaborate with SE architects and engineers to envision and design solutions which require code-based work, which complement the configured solution of the core product
- Clearly and regularly communicate to Project Managers all anticipated completion dates, risk factors, and any change in scope
- Helping system administrators during issue investigation and fixing (on-site troubleshooting)
- Helping Support and Maintenance team handle issues reported by customers

What we offer:

- Traveling, short term on-site stays and working with our customers. Longer on-site stays are optional and possible only upon mutual agreement.
- Learning and collaboration with IT experts from various enterprise from IT in ADMS field (e.g. software design and development, databases, security, system administration, hardware, computer networks, quality assurance, etc.)
- Possibility to quickly gain wide and deep comprehension of ADMS and IT knowledge in smart grid solutions
- A dynamic international working environment and a great career opportunity as a part of global Schneider Electric's ADMS Solution Architects network
- Attractive office space on top location in Novi Sad
- Free using of brand new Gym with professional trainers
