

# Database Administrator

## What will Ninja do?

- Provide database administration for TeleSign's production MSSQL, MySQL or PostgreSQL DBs
- Support activities which include DB installation, deployment, maintenance, performance tuning and optimization (SQL query, stored procedures & DB engine), troubleshooting/resolving DB problems, DB backups/restores and insuring DB monitoring is in place to proactively alert Network Operations to issues
- Provide consultative support to the Development, Business Intelligence and Knowledge Engineering organizations to insure database & table designs, indices, database access, are error free and optimal from a performance perspective
- Work closely with key staff to design/build a data warehouse from existing data sources
- Provide consultative support for those less knowledgeable of DBs

## What should Ninja have?

- Relevant University degree
- Fluency in English, verbal and written
- 3 -5 years' experience including MS SQL (2008, 2012 and/or 2014) and MySQL
- Experience in resolving DB problems, including working with DB providers, DB performance issues, use of native monitoring tools, DB backup and recovery, DB replication
- Use of Profiler and performance tuning of stored procedures

## An Ideal Ninja would have:

- Experience in PostgreSQL as a definite plus
- Experience in a fast moving, agile development based environment, preferably SaaS or cloud delivering based product offerings
- MCITP is a plus but not required
- Experience in SSRS and/or OLAP cubes
- Experience in scripting to support operations automation for DB related activities
- Understanding of Internet security concepts
- Familiarity with voice telecom and SMS messaging terminology
- Basic knowledge of BI concepts (cubes, ETL) and MS BI tools

## What's in it for Ninja?

- Good compensation package - Competitive € salary plus attractive benefits
- Development opportunities
- Challenging but also very friendly working environment
- And much, much more...
